

SmartSimple - Taking Grants Management to the Next Level

SmartSimple is endlessly configurable, streamlining every step in your grants management process. And, because SmartSimple is a fully cloud-based solution, the platform is future-ready and flexible enough to scale up or down with your organizational processes and needs. Everything can be created, managed and stored online, making your system accessible from anywhere at anytime. From data collection and analysis to powerful tracking and reporting features, SmartSimple provides everything a successful grants management program needs.

SmartSimple's robust platform offers the flexibility you need to manage the ever-evolving process needs of grant making organizations and their communities. Our extensive list of powerful features and integrations are designed to give you the ability to manage your entire process – from the initial call for proposals to tracking applications, creating acceptance letters and processing award payments.

Why Choose SmartSimple?

Our system ticks all the boxes when it comes to functional requirements for everyone involved in your application process. Personalized portals are created for grant seekers, reviewers, staff, board and community members with permissions that you control. This means your community members only see what they need to see, in the way you want them to see it.

Additional features include online document signing, field-level collaborative annotation, real-time integrations, dynamic application and review form 'versioning', a proprietary feature that offers enhanced document creation options. And, as a government agency, you can acquire access to SmartSimple via our GSA Advantage Schedule 70 status (contract GS-35F-458BA) and host on the Amazon GovCloud.

Security and Accessibility

SmartSimple complies with some of the toughest standards around, ranging from The Federal Information Security Management Act (FISMA) to The Payment Card Industry Data Security Standard (PCI DSS).

We are Service Organization Control (SOC 1) compliant and are on target to become SOC 2 compliant in 2016.

Our systems are compliant with international and domestic technology accessibility standards, including WCAG 2.0 and Section 508. In addition, we provide our clients with both public and private cloud options as an Advance Amazon Web Services (AWS) Technical Partner.

Our Clients

SmartSimple clients have a global reach, impacting communities around the world and are supported by our teams located in the United States, Canada and Ireland. SmartSimple interacts with nearly 50,000 unique users a month from almost 200 organizations. More than 55 organizations worldwide use GMS360° with approximately 18% government agencies, 23% corporate foundations and 18% independent organizations with the rest being family and community foundations.
